Anyone who says they understand IAS 39 has not read it ……

Professor Sir David Tweedie
Chairman of IASB
Scope – What is Financial Instrument?

A financial instrument is any contract that gives rise to
1. a financial asset of one entity, and
2. a financial liability or equity instrument of another entity
Initial Recognition & Measurement

• Initial recognition requirements for financial assets and financial liabilities in HKAS 39 are the same.
• An entity is required to recognise a financial asset or a financial liability on its balance sheet when, and only when, the entity becomes a party to the contractual provisions of the instrument.
• In other accounting standards, the recognition criteria are:
  1) it is probable that future economic benefits associated with the item will flow to (or flow out from) the entity; and
  2) the cost of the item can be measured reliably.

Implied trade date accounting

Implied settlement date accounting

Initial Recognition & Measurement

• For financial assets, an entity can choose to recognise and derecognise a financial asset using either:
  – trade date accounting or
  – settlement date accounting if it is a regular way purchase or sale of financial asset
    • a regular way purchase or sale is a purchase or sale of a financial asset under a contract whose terms require delivery of the asset within the time frame established generally by regulation or convention in the marketplace concerned.
Initial Recognition & Measurement

- HKAS 39 specifically states that a contract that requires or permits net settlement of the change in the value of the contract (such as derivative contract) is not a regular way contract.
  - Such contract is accounted for as a derivative in the period between the trade date and the settlement date.
- No matter which accounting method is used for a regular way purchase or sale, the method used is applied consistently for all purchases and sales of financial assets that belong to the same category of financial assets.

Financial instrument

Initial Recognition

Financial asset

Trade Date Accounting

Regular Way of Financial Assets

Initial Recognition & Measurement

- For both financial assets and financial liabilities, HKAS 39 has
  - the same initial recognition requirements
  - the same initial measurement basis
- When a financial asset or financial liability (except for it at fair value through profit or loss) is recognised initially, an entity is required to measure it at:
  1. its fair value plus
  2. its transactions costs that are directly attributable to the acquisition or issue of the financial asset or financial liability
Initial Recognition & Measurement

- In the case of a financial asset or financial liability that will be classified as financial asset or financial liability at fair value through profit or loss,
  - an entity is only required to measure it at its fair value only.
  - its transaction costs should not be recognised.

Fair value
- is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm’s length transaction.

Transaction costs
- are incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability.
- An incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial instrument.
**Initial Recognition & Measurement**

**Example**

**Fair value at Initial Recognition – Low Interest Loan**
- Entity A grants a 3-year loan of $50,000 to a related party, B, on 1 Jan. 2005 as one kind of financial assistance to support B’s operation.
  - A charges B at an interest rate of 2% as A expects the return on B’s future operation would be higher.
  - A charges another related party at a current market lending rate of 6%
- Discuss the implication of the loan.

**Fair value at Initial Recognition – No Interest Deposit**
- Entity X is required to deposit $50,000 to a customer in order to guarantee that it would complete the service contract in 5 years’ time.
- When the contract completes (say after 5 years), the deposit would be refunded in full without any interest.

---

**Initial Recognition & Measurement**

**Initial Measurement** (HKAS 39.AG64)
- The fair value of a financial instrument on initial recognition is normally the *transaction price* (i.e. the fair value of the consideration given or received).
- However, if part of the consideration given or received is for something other than the financial instrument, the fair value of the financial instrument is estimated, using a valuation technique.
  - For example, the fair value of a long-term loan or receivable that carries no interest can be estimated as
    - the present value of all future cash receipts discounted using the prevailing market rate(s) of interest for a similar instrument (similar as to currency, term, type of interest rate and other factors) with a similar credit rating.
  - Any additional amount lent is an expense or a reduction of income
    - unless it qualifies for recognition as some other type of asset.
Initial Recognition & Measurement

Case

• Accounting report 2006
  Held-to-maturity financial assets
  • Held-to-maturity financial assets are non-derivative financial assets that comprise fixed or determinable payments and maturities of which the Group has the positive intention and ability to hold until maturity.
  • Investments intended to be held for an undefined period are not included in this classification.
  • These investments are initially recognized at cost being the fair value of the consideration paid for the acquisition of the investment.
  • All transaction costs directly attributable to the acquisition are also included in the cost of the investment.

Initial Recognition & Measurement

Example

• Advance Finance Inc. grants a 3-year loan of $50,000 to a new customer on 1 January 2008.
• Advance Finance Inc. charges the interest at 4% per annum as it expects to generate more new business from this new customer.
• The current market lending rate of a similar loan is 6% per annum.
• Discuss the implication of the loan.
Initial Recognition & Measurement

Example

- On initial recognition, Advance Finance Inc. should recognise the loan receivable at the fair value.
- Even the best evidence of the fair value of the loan at initial recognition is the transaction price but part of the consideration given is for something other than the loan, the fair value of the loan should be estimated using a valuation technique.
- The fair value of the loan receivable can be estimated as the present value of all future cash receipts discounted using the prevailing market interest rate for a similar instrument.
- By using the market interest rate of 6% for a similar loan, Advance Finance Inc. derives the present value of the interests and principal repayments as follows:

<table>
<thead>
<tr>
<th>Cash inflow</th>
<th>Discount factor</th>
<th>Present value</th>
</tr>
</thead>
<tbody>
<tr>
<td>2008 $2,000</td>
<td>1 ÷ (1+6%)¹</td>
<td>$1,887</td>
</tr>
<tr>
<td>2009 2,000</td>
<td>1 ÷ (1+6%)²</td>
<td>1,780</td>
</tr>
<tr>
<td>2010 2,000</td>
<td>1 ÷ (1+6%)³</td>
<td>1,679</td>
</tr>
<tr>
<td>2010 50,000</td>
<td>1 ÷ (1+6%)³</td>
<td>41,981</td>
</tr>
</tbody>
</table>

Present value of all future cash receipts: $47,327

- Discounting the interest and principal repayments using the market rate of 6%, Advance Finance Inc. will recognise an originated loan of $47,327. The difference of $2,673 between $50,000 and $47,327 may represent the value of future business with the customer. However, it does not qualify for recognition as an asset and should be expensed immediately. Advance Finance Inc. recognises the loan receivable as follows:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Dr</td>
<td>$47,327</td>
</tr>
<tr>
<td>Financial asset</td>
<td></td>
</tr>
<tr>
<td>Profit or loss</td>
<td>2,673</td>
</tr>
<tr>
<td>Cr</td>
<td>$50,000</td>
</tr>
<tr>
<td>Cash</td>
<td></td>
</tr>
</tbody>
</table>
Today’s Agenda

Classification of Fin. Assets

Financial Assets – Classification

1. Financial assets at fair value through profit or loss
2. Available-for-sale financial assets
3. Loans and receivables
4. Held-to-maturity investments

- Initial recognition and measurement principle for financial assets and financial liabilities are the same
- But, HKAS 39 further defines financial asset into 4 categories for subsequent measurement (financial liability to be discussed later)

The 4-category classification will affect the subsequent measurement of financial assets, but not the initial measurement.
Financial Assets – Classification

- For the purpose of our discussion, five categories are used and explained for subsequent measurement of financial assets
  - Financial assets at fair value through profit or loss
  - Available-for-sale financial assets
  - Investments in equity instruments without fair value
  - Loans and receivables
  - Held-to-maturity investments

The categories named in HKAS 39

FA at FV through P/L
AFS financial assets
Loans and receivables
HTM investments

Determine the category of a financial asset for subsequent measurement

Meet conditions as investments in equity instruments without fair value yes Investments in equity instruments without fair value (at cost)
no
Classified as held for trading yes Financial assets at fair value through profit or loss
no
Designated as at fair value through profit or loss yes Available-for-sale financial assets (at fair value through equity)
no
Designated as available for sale yes Loans and receivables (at amortised cost)
no
Meet the definition of loans and receivables yes Held-to-maturity investments (at amortised cost)
no
Meet the definition and tainting rule of held-to-maturity investments

© 2006-08 Nelson
Financial Assets – Classification

• Even the requirements of HKAS 39 imply that the category of a financial asset determines the subsequent measurement of the financial asset,
  – an entity can choose to use all or some of the categories.
• Implicitly from the definitions and reclassification requirements in HKAS 39,
  – an entity has to determine the category of its financial asset at initial recognition.

Determine the category of a financial asset for subsequent measurement

Meet conditions as investments in equity instruments without fair value

3 conditions to qualify as investments in equity instruments without fair value:
1. The asset is an equity instrument
2. No active market for the asset
3. Fair value of the asset cannot be reliably measured

• No financial assets can be measured at cost
  – unless the financial asset is an investment in equity instrument that meets all the above three conditions.
• The category of “investments in equity instruments”
  – Also includes the derivatives that are linked to and must be settled by delivery of such unquoted equity instruments
  – Such derivatives are also measured at cost.
Financial Assets – Classification

Fair Value Measurement Consideration
• Fair value is defined in HKAS 39 and the same definition is used for both initial measurement and subsequent measurement.
• In determining whether there is a fair value for a financial instrument for subsequent measurement (whether it can be reliably measured),
  – HKAS 39 implies a hierarchy for the determination of fair value that an entity is required to apply.
  – The hierarchy refers to
    1. the existence of active market, and
    2. no existence of active market.

FA at FV through P/L
AFS financial assets
Loans and receivables
HTM investments

Financial Assets – Classification

Fair Value Measurement Consideration
• The best evidence of fair value
  – is quoted prices in an active market.
• Quote is in an active market
  – If quoted prices are readily and regularly available from an exchange, dealer, broker, industry group, pricing service or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm’s length basis.

FA at FV through P/L
AFS financial assets
Loans and receivables
HTM investments

Financial Assets – Classification

Fair Value Measurement Consideration

Active Market

- Different kinds of quoted market price would be used as reference in the following manner:
  - For a financial asset held or a financial liability to be issued
    - is usually the current bid price.
  - For a financial asset to be acquired or a financial liability held
    - is usually the asking price.
  - When an entity has assets and liabilities with offsetting market risks,
    - it may use mid-market prices as a basis for establishing fair values for the offsetting risk positions and apply the bid or asking price to the net open position as appropriate.
  - When current bid and asking prices are unavailable,
    - the price of the most recent transaction provides evidence of the current fair value.

Non Active Market

- If there is no quotation of an active market for a financial instrument or part of the consideration given or received in the transaction is for something other than the financial instrument,
  - the fair value of the financial instrument is estimated using a valuation technique.
Financial Assets – Classification

Fair Value Measurement Consideration

- Valuation techniques for financial instruments specified in HKAS 39 include:
  - using recent arm’s length market transactions between knowledgeable, willing parties, if available,
  - reference to the current fair value of another instrument that is substantially the same,
  - discounted cash flow analysis and
  - option pricing models.

- If there is a valuation technique commonly used by market participants to price the instrument and that technique has been demonstrated to provide reliable estimates of prices obtained in actual market transactions,
  - the entity uses that technique.

Financial Assets – Classification

Case

Accounting policy 2007

- The fair values of quoted investments in active markets are based on current bid prices.

- If the market for a financial asset is not active (and for unlisted securities), the Group establishes fair value by using valuation techniques.

- These include the use of
  - recent arm’s length transactions,
  - discounted cash flow analysis,
  - option pricing models and
  - other valuation techniques commonly used by market participants.
Fair Value Measurement Consideration

- When an investment in equity instrument can be classified as "investment in equity instrument without fair value",
  - it implies that, after the application the hierarchy for the determination of fair value, the entity is still unable to reliably measure the equity instrument.
- HKAS 39 further explains that the fair value of investments in equity instruments that do not have a quoted market price in an active market is still reliably measurable if
  1. The variability in the range of reasonable fair value estimates is not significant for that instrument or
  2. The probabilities of the various estimates within the range can be reasonably assessed and used in estimating fair value.

Financial Assets – Classification

- The definition of the category of “financial assets at fair value through profit or loss” is comparatively complicated.
  - Firstly, HKAS 39 formally describes this classification as “financial asset or financial liability at fair value through profit or loss” and
    - implies that the same definition of classification can be applied to both financial assets and financial liabilities.
  - Secondly, the definition of this classification requires that
    - certain financial instruments “held for trading” must be classified as “fair value through profit or loss”, and
    - an entity is allowed to choose to designate certain other financial instruments as “fair value through profit or loss” at their initial recognition.
Financial Assets – Classification

Determine the category of a financial asset for subsequent measurement

Meet conditions as investments in equity instruments without fair value

no

Classified as held for trading

Three situations to be held for trading:
1. Principally for the purpose of selling or repurchasing it in the near term
2. Evidence of a recent actual pattern of short-term profit-taking
3. A derivative (not being financial guarantee contact nor designated and effective hedging instrument)

FA at FV through P/L

Held for trading

To meet 3 conditions for initial designation as at fair value through profit or loss:
1. Embedded derivative condition
2. Accounting mismatch condition
3. Risk management condition

FA at FV through P/L

Designation

• When an entity chooses to use this fair value option and designates a financial instrument as at fair value through profit or loss,
  – it must make such designation at initial recognition of the financial instruments and meet at least any one of the above three conditions set out in HKAS 39.
Financial Assets – Classification

Upon initial recognition, an entity may designate a financial asset or financial liability as at fair value through profit or loss only:

- when permitted by HKAS 39.11 (in order to avoid separation of embedded derivative from hybrid contract), or
- when doing so results in more relevant information, because either
  i) it eliminates or significantly reduces a measurement or recognition inconsistency
  ii) financial assets, financial liabilities or both is managed and its performance is evaluated on a fair value basis

1. Embedded Derivative Condition
2. Eliminates Inconsistency
3. Managed on Fair Value Basis

Financial Assets – Classification

Case

Fair Value Through Profit and Loss (Annual Report 2006)

- Financial assets and financial liabilities are designated at fair value through profit or loss upon initial recognition when:
  - the financial assets or financial liabilities are managed, evaluated and reported internally on a fair value basis;
  - the designation eliminates or significantly reduces an accounting mismatch which would otherwise arise;
  - the financial asset or financial liability contains an embedded derivative that significantly modifies the cash flows that would otherwise be required under the contract; or
  - the separation of the embedded derivatives from the financial instrument is prohibited.

- All derivatives not qualified for hedging purposes are included in this category and are carried as assets when their fair value is positive and as liabilities when their fair value is negative.
Financial Assets – Classification

- When an entity has chosen to apply fair value option to a financial asset,
  - the definition of the fair value option additionally imposes strict requirements on measurement and disclosure.

- The definition of financial asset at fair value through profit or loss specifically requires that
  - an entity is not allowed to designate any investments in equity instruments without fair value as at fair value through profit or loss.

- It also describes that requirements for determining a reliable measure of the fair value of a financial asset, apply equally to all items that are measured at fair value, whether by designation or otherwise, or whose fair value is disclosed.

- Additional disclosure is also found in HKFRS 7.

Financial Assets – Classification

- **Available-for-sale financial assets** are those non-derivative financial assets that
  - are designated as available for sale or
  - are not classified as
    1. Loans and receivables,
    2. Held-to-maturity investments or
    3. Financial assets at fair value through profit or loss.
Financial Assets – Classification

Determine the category of a financial asset for subsequent measurement

Meet conditions as investments in equity instruments without fair value
  no
Classified as held for trading
  no
Designated as at fair value through profit or loss
  no
Designated as available for sale
  yes

Non-derivative financial asset
  • Implicitly, the designation is made at initial recognition

AFS financial assets

Investments in equity instruments without fair value (at cost)

Available-for-sale financial assets
  (at fair value through equity)

Residual category

Financial Assets – Classification

• Theoretically, investments in equity instruments without fair value are also available-for-sale financial assets, because
  – the definition of financial assets at fair value through profit or loss excludes investments in equity instruments,
  – as equity instruments do not have fixed maturity and fixed or determinable payment, they are not classified as loans and receivables and held-to-maturity investments
• In consequence, investments in equity instruments without fair value should also
  – be the “residual” investments and
  – be regarded as available-for-sale financial assets.

Financial Assets – Classification

Determine the category of a financial asset for subsequent measurement

Meet conditions as investments in equity instruments without fair value

no

Classified as held for trading

no

Designated as at fair value through profit or loss

no

Designated as available for sale

no

Meet the definition of loans and receivables

• Non-derivative financial asset
• With fixed or determinable payments
• Not quoted in an active market
• Other than those for which the holder may not recover substantially all of its initial investment

Loans and receivables
Financial Assets – Classification

- Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market, other than:
  1. those that the entity intends to sell immediately or in the near term, which shall be classified as “held for trading”, and those that the entity upon initial recognition designates as at “fair value through profit or loss”;  
  2. those that the entity upon initial recognition designates as “available for sale”; or  
  3. those for which the holder may not recover substantially all of its initial investment, other than because of credit deterioration, which shall be classified as “available for sale”.

An interest acquired in a pool of assets that are not loans or receivables (for example, an interest in a mutual fund or a similar fund) is not a loan or receivable.

---

Financial Assets – Classification

Determine the category of a financial asset for subsequent measurement

- Meet conditions as investments in equity instruments without fair value
  - no
  - Classified as held for trading
    - no
  - Designated as at fair value through profit or loss
    - no
  - Designated as available for sale
    - no
  - Meet the definition of loans and receivables
    - no
  - Meet the definition and tainting rule of held-to-maturity investments
    - • Non-derivative financial asset  
      • Fixed or determinable payments  
      • Fixed maturity  
      • Positive intention and ability to hold to maturity  
      • Other than those classified in other categories  
      • Meet the “tainting rule” and does not trigger any restriction

HTM investments
Financial Assets – Classification

• Held-to-maturity investments are defined as:
  – non-derivative financial assets with fixed or determinable payments and fixed maturity that an entity has the positive intention and ability to hold to maturity other than:
    1. those that the entity upon initial recognition designates as at “fair value through profit or loss”;
    2. those that the entity designates as “available for sale”; and
    3. those that meet the definition of “loans and receivables”.

Financial Assets – Classification

Meeting the Definition of Loans and Receivables

• While both loans and receivables and held-to-maturity investments are non-derivative financial assets with fixed or determinable payments, their differences are that:
  – Fixed maturity is required for held-to-maturity investments but not required for loans and receivable.
  – Positive intention and ability to hold to maturity investments is required for held-to maturity investments but not required for loans and receivables.
  – Loans and receivables cannot be a financial asset for which the holder may not recover substantially all of its initial investment, other than because of credit deterioration.
  – Loans and receivables must not be quoted in an active market but such requirement is not imposed on held-to-maturity investments.
  – Loans and receivables are not subject to tainting rule, which is applied to held-to-maturity.
## Financial Assets – Classification

### Example

**Bond with index-linked interest**
- Entity A buys a bond with a fixed payment at maturity and a fixed maturity date.
- The bond’s interest payments are indexed to the price of a commodity or equity.
- Entity A has positive intention and ability to hold the bond to maturity.
- Can Entity A classify the bond as a HTM investment?

**Yes.**
- However, the commodity-indexed or equity-indexed interest payments result in an Embedded Derivative that is separated and accounted for as a derivative at fair value.

---

### Tainting Rule

An entity shall not classify any financial assets as held to maturity if:
- the entity has,
  - during the current financial year or
  - during the two preceding financial years,
  - sold or reclassified more than an insignificant amount of held-to-maturity investments before maturity
  (more than insignificant in relation to the total amount of held-to-maturity investments)
- other than sales or reclassifications that:
  - are so close to maturity or the financial asset’s call date (for example, less than three months before maturity) that changes in the market rate of interest would not have a significant effect on the financial asset’s fair value;
  - occur after the entity has collected substantially all of the financial asset’s original principal through scheduled payments or prepayments; or
  - are attributable to an isolated event that is beyond the entity’s control, is non-recurring and could not have been reasonably anticipated by the entity.
Financial Assets – Classification

**Example**

**Sale of HTM investments**

- Entity A sells $1,000 bonds from its HTM portfolio with $5,000 bonds on interim date of 2003 before the bonds will be matured in 2007.
- Since Entity A wants to realise the appreciation in market price of the bonds.

  - The disposed bonds would be over an insignificant amount of the whole portfolio and it is not an exemption from Tainting Rule.
  - The sale of part of the HTM portfolio “taints” that the entire portfolio and all remaining investments in the HTM category must be reclassified.
  - Entity A will be prohibited from classifying any assets as HTM investments for 2 full financial years, until the year of 2006.

**Financial Assets – Classification**

**Example**

**Downgrade of Credit Rating**

Would a sale of a held-to-maturity investment following a *downgrade of the issuer’s credit rating* by a rating agency raise a question about the entity’s intention to hold other investments to maturity?

**Not necessarily**

- A downgrade is likely to indicate a decline in the issuer’s creditworthiness.
- HKAS 39 specifies that a sale due to a significant deterioration in the issuer’s creditworthiness could satisfy the condition in HKAS 39 and therefore not raise a question about the entity’s intention to hold other investments to maturity.
- However, the deterioration in creditworthiness must be significant judged by reference to the credit rating at initial recognition.
- Also, the rating downgrade must not have been reasonably anticipated when the entity classified the investment as held to maturity in order to meet the condition in HKAS 39.
Different categories of HTM Investments

Can an entity apply the **Tainting Rule** for held-to-maturity classification separately to different categories of HTM investments, such as
- debt instruments denominated in US dollars and
- debt instruments denominated in Euro?

**No.**
- The **Tainting Rule** is clear
  - If an entity has sold or reclassified more than an insignificant amount of HTM investments, it cannot classify any financial assets as HTM investments.

Different entities in a group

Can an entity apply the **Tainting Rule** separately to HTM investments held by different entities in a consolidated group, for example, if those group entities are in different countries with different legal or economic environments?

**No.**
- If an entity has sold or reclassified more than an insignificant amount of investments classified as held-to-maturity in the consolidated financial statements, it cannot classify any financial assets as HTM investments in the consolidated financial statements unless the exemption conditions in HKAS 39 are met.
Today’s Agenda

Measurement of Fin. Assets

Financial Assets – Measurement

• At initial recognition,
  – Financial asset is normally using trade date accounting at fair value plus transaction cost, except for financial asset at fair value through profit or loss.
  – Financial asset at fair value through profit or loss is initially recognised at fair value only.
• After initial recognition, an entity is required to measure financial assets, including derivatives that are assets, at their fair values, except for the following financial assets:
  – Investments in equity instruments without fair value
  – Loans and receivables
  – Held-to-maturity investments

© 2006-08 Nelson
**Financial Assets – Measurement**

- **Amortised cost** of a financial instrument is:
  - the amount at which the financial instrument is measured at initial recognition
  - minus principal repayments,
  - plus or minus the cumulative amortisation using the **effective interest method** of any difference between that initial amount and the maturity amount, and
  - minus any reduction (directly or through the use of an allowance account) for **impairment** or **uncollectibility**.

---

**Financial Assets – Measurement**

- An entity is required to use the **effective interest method** and **effective interest rate** to subsequently measure loans and receivables and held-to-maturity investments at amortised cost.
  - The **effective interest method** is a method:
    - of calculating the amortised cost of a financial asset or a financial liability (or group of financial assets or financial liabilities) and
    - of allocating the interest income or interest expense over the relevant period.
  - The **effective interest rate** is the rate that exactly discounts
    - estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period
    - to the net carrying amount of the financial asset or financial liability.
Financial Assets – Measurement

Example

• On 2 January 2007, Knut Investments Limited purchased a new 5-year debt instrument at its fair value plus transaction costs at $8,000.

• The principal amount of the instrument was $10,000 and the instrument carried fixed interest of 4.75% that would be paid annually.

• The issuer of the instrument had an option to prepay the instrument and that no penalty would be charged for prepayment.

• At inception, Knut expected the issuer not to exercise this option and there is no incurred credit loss.

• Explain and calculate the effective interest rate of the 5-year debt instrument for Knut.

The effective interest rate is the rate that exactly discounts estimated future cash receipts through the expected life of the instrument to the net carrying amount of the instrument.

In Knut’s case, the estimated future cash receipts are the annual interest receipts ($10,000 × 4.75% = $475 per year) and the final principal receipts ($10,000) and the expected life of the instrument is 5 years, the effective interest rate can be found by using the following equation:

\[
8,000 = \frac{475}{(1+r)^1} + \frac{475}{(1+r)^2} + \frac{475}{(1+r)^3} + \frac{475}{(1+r)^4} + \frac{475 + 10,000}{(1+r)^5}
\]

The effective interest rate, \(r\), should be 10.03%. In other words, in order to allocate interest receipts ($475) and the initial discount ($10,000 – $8,000 = $2,000) over the term of the debt instrument at a constant rate on the carrying amount, the effective interest must be accrued at the rate of 10.03% annually.
Financial Assets – Measurement

Example

Based on the previous example, Knut Investments Limited purchases a new 5-year debt instrument at its fair value plus transaction costs at $8,000 on 2 January 2007.

- The principal amount of the instrument is $10,000 and the instrument carried fixed interest of 4.75% that is paid annually.
- The effective interest rate as estimated is 10.03%.
- Explain and calculate the amortised cost and interest income of the 5-year debt instrument for Knut in each reporting period.

While the initial amount of the 5-year debt instrument is $8,000 and its principal (or maturity amount) is $10,000, Knut has purchased the instrument at a discount.

- Since the effective interest is accrued at 10.03% annually, the interest income for 2007 will be $802 ($8,000 × 10.03%) and the amortisation of the discount will be $327 ($802 – $475).

In consequence, the amortised cost of the 5-year debt instrument at the end of 2007 will be:

```
<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>The amount at which financial asset is measured at initial recognition</td>
<td>$8,000</td>
</tr>
<tr>
<td>Minus principal repayments</td>
<td>0</td>
</tr>
<tr>
<td>Plus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount</td>
<td>327</td>
</tr>
<tr>
<td>Minus any reduction for impairment or uncollectibility</td>
<td>0</td>
</tr>
<tr>
<td>Amortised cost at the end of 2007</td>
<td>$8,327</td>
</tr>
</tbody>
</table>
```
Financial Assets – Measurement

Example

• The amortised cost, interest income and cash flows of the debt instrument in each reporting period can be summarised as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Amortised cost at the beginning</th>
<th>Interest income</th>
<th>Cash inflows</th>
<th>Amortised cost at the end of the year</th>
</tr>
</thead>
<tbody>
<tr>
<td>2007</td>
<td>$8,000</td>
<td>$802</td>
<td>$475</td>
<td>$8,327</td>
</tr>
<tr>
<td>2008</td>
<td>8,327</td>
<td>836</td>
<td>475</td>
<td>8,688</td>

• For example, in 2007, the following journal entries should be recognised by Knut:

Dr Loans and receivables $8,000
Cr Cash $8,000

• Being the initial recognition of the 5-year debt instrument.

Financial Assets – Measurement

Example

Dr Loans and receivables $802
Cr Profit or loss $802

To recognise the interest income using the effective interest rate.

Dr Cash $475
Cr Loans and receivables $475

Being the cash received from the 5-year debt instrument at the end of 2007.

• The last two journal entries above may be combined and recognised as follows:

Dr Loans and receivables $327
Cr Cash $475

To recognise the interest income using the effective interest rate and the cash received from the 5-year debt instrument at the end of 2007.
Financial Assets – Measurement

Activity 1

Changes in Accounting Estimates for Effective Interest Rate

- Based on the above examples:
  - On 2 January 2007, Knut Investments Limited purchased a new 5-year debt instrument at its fair value plus transaction costs at $8,000. The principal amount of the instrument was $10,000 and the instrument carried fixed interest of 4.75% that would be paid annually. The issuer of the instrument had an option to prepay the instrument and that no penalty would be charged for prepayment. At inception, Knut expected the issuer not to exercise this option and there is no incurred credit loss.

- New information:
  - At the beginning of 2008, Knut Investments Limited revised its expectation and estimated that the issuer of the 5-year debt instrument would repay 40% of the amount of the instrument at the end of 2008.

- Explain and calculate the amortised cost and interest income of the 5-year debt instrument for Knut in each reporting period.

Financial Assets – Measurement

- The classification of financial assets determines
  - not only the measurement of financial assets
  - but also the recognition of changes in fair value of the financial assets and the gain or loss arising from such changes.
Financial Assets – Measurement

An entity is required to recognise a gain or loss on an available-for-sale financial asset directly in equity (or in other comprehensive income) until the financial asset is derecognised,

– except for:
  • impairment losses and
  • foreign exchange gains and losses.

At the time when an available-for-sale financial asset is derecognised, the cumulative gain or loss previously recognised in equity (or in other comprehensive income) is recognised in (or reclassified from equity to) profit or loss.

Activity 2

Available-for-Sale Debt Instrument at Foreign Currency

On 31 October 2007, Snow Finance Limited acquired a portfolio of UK unlisted debt instruments with zero interest at GBP 800,000, being the fair value and amortised cost of 31 October 2007.

At 31 March 2008,
  – the amortised cost of the instruments became GBP 820,000
  – while the market value was GBP 900,000.

Snow classified the instruments as available-for-sale financial assets.

The functional currency of Snow is HK dollars and the exchange rate of UK GBP was
  – HK$14 at 31 October 2007 and

Discuss the implication of the above investment on the balance sheet and income statement.
### Financial Assets – Reclassification

#### Reclassification

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>FA at FV through P/L</strong></td>
<td>An entity shall <strong>NOT</strong> reclassify a financial instrument into or out of the fair value through profit or loss category while it is held or issued.</td>
</tr>
<tr>
<td><strong>AFS financial assets</strong></td>
<td>Not described in HKAS 39 but, implicitly, it is not feasible to reclassify a financial instrument into or out of the loans and receivables category.</td>
</tr>
<tr>
<td><strong>Loans and receivables</strong></td>
<td></td>
</tr>
<tr>
<td><strong>HTM investments</strong></td>
<td></td>
</tr>
</tbody>
</table>

From 1 July 2008 (issued in Oct 2008) ……

An entity:
  a) shall **not** reclassify a derivative out of the fair value through profit or loss category while it is held or issued;
  b) shall **not** reclassify any financial instrument out of the fair value through profit or loss category if upon initial recognition it **was designated** by the entity as at fair value through profit or loss; and
  c) **may**, if a financial asset is no longer held for the purpose of selling or repurchasing it in the near term (notwithstanding that the financial asset may have been acquired or incurred principally for the purpose of selling or repurchasing it in the near term), reclassify that financial asset out of the fair value through profit or loss category if the requirements in HKAS 39.50B or 50D are met.

An entity shall **not** reclassify any financial instrument into the fair value through profit or loss category after initial recognition.
Implication

- An entity is permitted
  - to reclassify non-derivative financial assets held for trading out of the fair value through profit or loss category in particular circumstances
  - to transfer from the available-for-sale category to the loans and receivables category a financial asset that would have met the definition of loans and receivables (if the financial asset had not been designated as available for sale), if the entity has the intention and ability to hold that financial asset for the foreseeable future

Reclassification

Reclassification of financial assets held for trading

- A non-derivative financial asset held for trading (other than those met the definition of loans and receivables) may be reclassified out of the fair value through profit or loss category only in rare circumstances.
Financial Assets – Reclassification

Reclassification

Measurement on the reclassification date

- If an entity reclassifies a financial asset out of the fair value through profit or loss category, the financial asset shall be reclassified at its fair value on the date of reclassification.
- Any gain or loss already recognised in profit or loss shall not be reversed.
- The fair value of the financial asset on the date of reclassification becomes its new cost or amortised cost, as applicable.

Equity securities

Financial Assets – Reclassification

Reclassification

For financial assets met the definition of loans and receivables (from the fair value through profit or loss category)

- A financial asset to be reclassified that would have met the definition of loans and receivables (if the financial asset had not been required to be classified as held for trading at initial recognition) may be reclassified out of the fair value through profit or loss category
  - if the entity has the intention and ability to hold the financial asset for the foreseeable future or until maturity.

© 2006-08 Nelson
Reclassification

For financial assets met the definition of loans and receivables (from available-for-sale):

- A financial asset classified as available for sale that would have met the definition of loans and receivables (if it had not been designated as available for sale) may be reclassified out of the available-for-sale category to the loans and receivables category
  - if the entity has the intention and ability to hold the financial asset for the foreseeable future or until maturity.

Reclassification

For financial assets met the definition of loans and receivables:

- If an entity reclassifies a financial asset out of the fair value through profit or loss category (HKAS 39.50D) or out of the available-for-sale category (HKAS 39.50E),
  - it shall reclassify the financial asset at its fair value on the date of reclassification.
Financial Assets – Reclassification

**Reclassification**

- For a financial asset out of the fair value through profit or loss category (HKAS 39.50D),
  - any gain or loss already recognised in profit or loss shall not be reversed
  - the fair value of the financial asset on the date of reclassification becomes its new cost or amortised cost, as applicable.

- For a financial asset reclassified or out of the available-for-sale category (HKAS 39.50E),
  - any previous gain or loss on that asset that has been recognised in other comprehensive income (or equity) shall be accounted for in accordance with HKAS 39.54 (to be discussed).

**Debt Securities**

- Reclassification of Financial Assets (Amendments to HKAS 39 and HKFRS 7), issued in October 2008, amended HKAS 39.50 and AG8, and added HKAS 39.50B–50F.
- An entity shall apply those amendments from 1 July 2008.
- An entity shall not reclassify a financial asset in accordance with HKAS 39.50B, 50D or 50E before 1 July 2008.
- Any reclassification of a financial asset made in periods beginning on or after 1 November 2008 shall take effect only from the date when the reclassification is made.
- Any reclassification of a financial asset in accordance with HKAS 39.50B, 50D or 50E shall not be applied retrospectively to reporting periods ended before the effective date set out in HKAS 39.103G.

### Financial Assets – Reclassification

**Reclassification**

- **A change in intention or ability**
  - HTM investments shall be
    - reclassified as AFS financial assets
    - re-measured at fair value, and
    - the difference between its carrying amount and fair value shall be recognised directly in equity

- **Tainting rule triggered**
  - Any remaining HTM investments shall be reclassified as AFS financial assets.
  - On such reclassification, the difference between their carrying amount and fair value shall be recognised directly in equity
Financial Assets – Reclassification

Reclassification

If a reliable measure becomes available on fair value
- the asset shall be re-measured at fair value, and
- the difference between its carrying amount and fair value shall be accounted for depending the classification of such asset as
  - FA at FV through P/L, or
  - AFS financial assets

© 2006-08 Nelson

Financial Assets – Reclassification

Reclassification

- In case of
  - a change in intention or ability
  - in the rare circumstance, a reliable measure of fair value is no longer available, or
  - tainting rule expires
- Then, it becomes appropriate to carry a financial asset at cost or amortised cost rather than at fair value

© 2006-08 Nelson
Financial Assets – Reclassification

Reclassification

- The fair value carrying amount of the asset on that date becomes its new cost or amortised cost, as applicable.
- Any previous gain or loss on that asset that has been recognised directly in equity shall be accounted for as follows:
  a) In the case of a financial asset with a fixed maturity
     - the gain or loss shall be amortised to P/L over the remaining life of the HTM investment using the effective interest method.
  b) In the case of a financial asset that does not have a fixed maturity
     - the gain or loss shall remain in equity until the financial asset is sold or otherwise disposed of, when it shall be recognised in P/L.

AFS financial assets
- at Fair Value
- at Cost

HTM investments
- at Amortised Cost

Financial Assets – Reclassification

Activity 3

Reclassification of Debt Instruments

- On 2 January 2008, Bonnie Singapore Limited reclassified its investment in 6% debt instrument with a cost of $105,998 and a fair value of $113,815
  - from available-for-sale financial assets to held-to-maturity investment.
- The debt instrument pays 6% interest annually on 30 June and has a maturity value of $120,000 on 31 December 2010.
- Discuss the implication of the reclassification and suggest journal entries.
Financial Assets – Impairment

• Before HKAS 39,
  – there was no HKAS or HKFRS to mandate an assessment of the impairment or the collectability of financial assets.
• Even nearly all entities would assess the recoverability of financial assets, in particular trade or other receivables, and make different amounts of bad debt, provision for bad debt or provision for doubtful debt,
  – there were no consistent practices.

Financial Assets – Impairment

• HKAS 39 introduces the compulsory and consistent requirements in assessing the impairment and collectability of financial assets and requires that all financial assets, except for those financial assets measured at fair value through profit or loss, are subject to review for impairment.
• In accordance with the HKAS 39, an entity is required to adopt the following two-step approach in recognising the impairment loss:
  – Assessment of objective evidence of impairment, and
  – Measurement and recognition of impairment loss.
Financial Assets – Impairment

Investments in Equity Instruments without Fair Value

• For investment in equity instrument without fair value (including a derivative asset that is linked to and must be settled by delivery of such an unquoted equity instrument), if there is objective evidence that an impairment loss has been incurred on such investment,

  – the amount of the impairment loss is measured as the difference between:

    • the carrying amount of the financial asset, and
    • the present value of estimated future cash flows discounted at the current market rate of return for a similar financial asset.

• NO reversal of impairment loss on investments in equity instruments without fair value would be allowed.

Financial Assets – Impairment

Loans and receivables & held-to-maturity investments

• HKAS 39 provides specific guidance in assessing the objective evidence of their impairment and in measuring and recognising the impairment loss.

  – The process for estimating impairment considers all credit exposures, not only those of low credit quality;
  – The process in assessing the objective evidence and the process in measuring the impairment loss are illustrated separately below, they can be performed simultaneously.
Financial Assets – Impairment

Loans and receivables & held-to-maturity investments

• Two-Stage Assessment of Objective Evidence
  – Before an impairment loss is measured and recognised, an entity is required to assess whether objective evidence of impairment exists for loans and receivables and held-to-maturity investments using a two-stage assessment approach as follows:
    1. **First stage (individual assessment)** – an entity is required to firstly assess whether objective evidence of impairment exists
       • individually for the financial assets that are individually significant, and
       • individually or collectively for the financial assets that are not individually significant.
    2. **Second stage (collective assessment)** – If an entity determines that no objective evidence of impairment exists for an individually assessed financial asset, whether significant or not, it includes the asset in a group of financial assets with similar credit risk characteristics and collectively assesses them for impairment.

Financial Assets – Impairment

Case

Ping An Insurance (Group) Co. of China, Ltd.

• Accounting report 2006
  Impairment of financial assets
  • The Group assesses at each balance sheet date whether a financial asset or group of financial assets is impaired …..
  • The Group first assesses whether objective evidence of impairment exists
    – individually for financial assets that are individually significant, and
    – individually or collectively for financial assets that are not individually significant.
  • If it is determined that no objective evidence of impairment exists for an individually assessed financial asset, whether significant or not,
    – the asset is included in a group of financial assets with similar credit risk characteristics and
    – that group of financial assets is collectively assessed for impairment.
  • Assets that are individually assessed for impairment and for which an impairment loss is or continues to be recognized
    – are not included in a collective assessment of impairment.
  • The impairment assessment is performed at each balance sheet date.
Financial Assets – Impairment

Loans and receivables & held-to-maturity investments

- If there is objective evidence that an impairment loss on loans and receivables or held-to-maturity investments carried at amortised cost has been incurred, the amount of the impairment loss is measured as the difference between:
  - the asset’s carrying amount
  - the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset’s original effective interest rate (i.e. the effective interest rate computed at initial recognition).

The amount of the impairment loss on loans and receivables or held-to-maturity investments is recognised in profit or loss while the carrying amount of the impaired asset is reduced either:

- directly in the asset or
- through use of an allowance account.
Financial Assets – Impairment

**Amortised Cost on Low Interest Loan**
- Entity A grants a 3-year loan of $50,000 to an important new customer in 1 Jan. 2005
  - The interest rate on the loan is 4%
  - The current market lending rates for similar loans is 6%
- On initial recognition, Entity A recognised $47,327 and at 31 Dec. 2005, the amortised cost was $48,167. The repayment schedule is:

<table>
<thead>
<tr>
<th>Date</th>
<th>Balance b/f</th>
<th>Effective interest (6%)</th>
<th>Interest received (4%)</th>
<th>Balance c/f</th>
</tr>
</thead>
<tbody>
<tr>
<td>31.12.2005</td>

Impairment loss $3,667

Dr Impairment loss (in income statement) $3,667
Cr Allowance on impairment loss (alternatively, Loans and receivables) $3,667
Financial Assets – Impairment

Activity 4

Impairment on Debt Instrument

• In Activity 1:
  – Knut Investments Limited purchased a 5-year debt instrument at its fair value plus transaction costs at $8,000 on 2 January 2007 and the instrument was classified as loans and receivables. The principal amount of the instrument was $10,000 and the instrument carried fixed interest of 4.75% that would be paid annually. The effective interest rate as estimated was 10.03%.

• New information:
  – At the beginning of 2008 when the instrument’s carrying amount was $8,327, because of the subprime and credit crunch in the United States and worldwide, the issuer of the debt instrument declared that it would not prepay the debt but instead would be unable repay all the principal and interests. It would only repay 60% of the outstanding interests and 80% of the outstanding principal.
  – Knut considered that 20% of the instrument’s carrying amount of $8,327 at the beginning of 2008 should be considered as uncollectible and a loss of bad debt of $1,665.4 ($8,327 × 20%) should be provided.

• Discuss and suggest journal entries for 2008.

Financial Assets – Impairment

Loans and receivables & held-to-maturity investments

• An entity is required to reverse the previously recognised impairment loss on loans and receivables or held-to-maturity investments either directly or by adjusting an allowance account if, in a subsequent period, the following two conditions are met:
  – the amount of the impairment loss decreases and
  – the decrease can be related objectively to an event occurring after the impairment was recognised (such as an improvement in the debtor’s credit rating).

• The amount of the reversal is recognised in profit or loss but it must not result in a carrying amount of the financial asset that exceeds what the amortised cost would have been had the impairment not been recognised at the date the impairment is reversed.
Financial Assets – Impairment

Available-for-Sale Financial Assets

- For available-for-sale financial asset carried at fair value, an entity recognises the impairment loss on it only when:
  - a decline in the fair value of an available-for-sale financial asset has been recognised directly in equity and
  - there is objective evidence that the asset is impaired.

- In recognising the impairment loss on an available-for-sale financial asset, the entity
  - removes the cumulative loss that had been recognised directly in equity from equity and
  - recognises the loss in profit or loss even though the financial asset has not been derecognised.

Available-for-Sale Financial Assets

- The amount of the cumulative loss that is removed from equity and recognised in profit or loss is the difference between:
  - the acquisition cost (net of any principal repayment and amortisation) and
  - the current fair value, less any impairment loss on that financial asset previously recognised in profit or loss.
**Financial Assets – Impairment**

**Available-for-Sale Financial Assets**

- Impairment losses on available-for-sale equity instruments cannot be reversed through profit or loss (HKAS 39.69), i.e. any subsequent increase in fair value is recognised in equity.

- Reversal of the impairment loss on available-for-sale debt instrument through profit or loss is instead allowed.
  - After an impairment loss on available-for-sale debt instrument is recognised in profit or loss, if (1) the fair value of such instrument increases and (2) the increase can be objectively related to an event occurring after the recognition of impairment loss through profit or loss,
    - an entity reverses the impairment loss, with the amount of the reversal recognised in profit or loss.

---

**Impairment reserves**

- In view of the market downturn, Entity C proposes to recognise impairment or bad debt losses in excess of impairment losses that are determined on the basis of objective evidence about impairment in loan receivables from customers.

- Does HKAS 39 permit such recognition?
  - No.
    - HKAS 39 does not permit an entity to recognise impairment or bad debt losses in addition to those that can be attributed to individually identified financial assets or identified groups of financial assets with similar credit risk characteristics on the basis of objective evidence about the existence of impairment in those assets.
    - Amounts that an entity might want to set aside for additional possible impairment in financial assets, such as reserves that cannot be supported by objective evidence about impairment, are not recognised as impairment or bad debt losses under HKAS 39.
Financial Assets – Impairment

Impairment at Initial Recognition

- Entity A lends $2,000 to Customer B
- Based on past experience, Entity A expects that 1% of the principal amount of loans given will not be collectable.
- Can Entity A recognise an immediate impairment loss of $20?
  
  No.
  - HKAS 39 requires financial asset to be initially measured at fair value.
  - For a loan asset, the fair value is the amount of cash lent adjusted for any fees and costs (unless a portion of the amount lent is compensation for other stated or implied rights or privileges).
  - In addition, HKAS 39 further requires that an impairment loss is recognised only if there is objective evidence of impairment as a result of a past event that occurred after initial recognition.
  - Thus, it is inconsistent with HKAS 39 to reduce the carrying amount of a loan asset on initial recognition through the recognition of an immediate impairment loss.

Financial Assets – Impairment

Impairment Based on Ageing Analysis

- Entity A calculates impairment in the unsecured portion of loans and receivables on the basis of a provision matrix – that specifies fixed provision rates for the number of days a loan has been classified as non-performing as follows:
  - 0% if less than 90 days
  - 20% if 90-180 days
  - 50% if 181-365 days, and
  - 100% if more than 365 days
- Can the results be considered to be appropriate for the purpose of calculating the impairment loss on loans and receivables?
  
  Not necessarily.
  - HKAS 39 requires impairment or bad debt losses to be calculated as the difference between the asset’s carrying amount and the present value of estimated future cash flows discounted at the financial instrument’s original effective interest rate.
Financial Assets – Impairment

Impairment on Portfolio Basis

• If one loan in Entity A is impaired but the fair value of another loan in Entity A is above its amortised cost.
• Does HKAS 39 allow non-recognition of the impairment of the first loan?

No.
• If an entity knows that an individual financial asset carried at amortised cost is impaired, HKAS 39 requires that the impairment of that asset should be recognised.
• HKAS 39 states: "the amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset's original effective interest rate."
• Measurement of impairment on a portfolio basis under HKAS 39 may be applied to groups of small balance items and to financial assets that are individually assessed and found not to be impaired when there is indication of impairment in a group of similar assets and impairment cannot be identified with an individual asset in that group.

Financial Assets – Impairment

Aggregate Fair Value Less Than Carrying Amount

• HKAS 39 requires that gains and losses arising from changes in fair value on AFS financial assets are recognised directly in equity.
• If the aggregate fair value of such assets is less than their carrying amount, should the aggregate net loss that has been recognised directly in equity be removed from equity and recognised in profit or loss?

Not necessarily.
• The relevant criterion is not whether the aggregate fair value is less than the carrying amount, but whether there is objective evidence that a financial asset or group of assets is impaired.
• An entity assesses at each balance sheet date whether there is any objective evidence that a financial asset or group of assets may be impaired.
• HKAS 39 states that a downgrade of an entity's credit rating is not, of itself, evidence of impairment, although it may be evidence of impairment when considered with other available information.
• Additionally, a decline in the fair value of a financial asset below its cost or amortised cost is not necessarily evidence of impairment (e.g. a decline in the fair value of a bond resulting from an increase in the basic risk-free interest rate).
After initial recognition, an entity shall measure all financial liabilities at amortised cost using the effective interest method, except for:

a) financial liabilities at fair value through profit or loss
b) financial liabilities that arise
   • when a transfer of a financial asset does not qualify for derecognition, or
   • when the continuing involvement approach applies.

c) Financial guarantee contracts

d) Commitments to provide a loan at a below-market interest rate.
Financial Liabilities – Classification

Amortised cost
• Amortised cost
  – As those discussed in financial assets

FL at FV through P/L
• Financial liabilities at fair value through profit or loss
  • Similar to financial asset at fair value through profit or loss
    – Those held for trading
      • Acquired principally for selling in the near term
      • Recent actual short-term profit taking
      • Derivatives that are liabilities (except for hedging instruments)
    – Those designated (if allowed)
      • Excluded those unquoted and fair value cannot be reliably measured
      • If a financial instrument that was previously recognised as a financial asset is measured at fair value and its fair value falls below zero, it is a financial liability

Continuing involvement
• Financial liabilities that arise when
  – a transfer of a financial asset does not qualify for derecognition, or
  – when the Continuing Involvement Approach applies

Financial liabilities held for trading include:
  a) derivative liabilities that are not accounted for as hedging instruments;
  b) obligations to deliver financial assets borrowed by a short seller (i.e. an entity that sells financial assets it has borrowed and does not yet own);
  c) financial liabilities that are incurred with an intention to repurchase them in the near term (e.g. a quoted debt instrument that the issuer may buy back in the near term depending on changes in its fair value); and
  d) financial liabilities that are part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent pattern of short-term profit-taking.

• The fact that a liability is used to fund trading activities does not in itself make that liability one that is held for trading.
Financial Liabilities – Classification

- **Financial guarantee contract** is defined in HKAS 39 as a contract that:
  - requires the issuer to make specified payments to reimburse the holder for a loss it incurs
  - because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument.

- Financial guarantee contracts may have various legal forms, such as:
  - a guarantee
  - some types of letter of credit
  - a credit default contract or
  - an insurance contract

Financial Liabilities – Measurement

- Financial guarantee contracts and commitment to provide a loan at a below-market interest rate are within the scope of HKAS 39.

- In consequence, the issuer shall initially recognise and measure it as other financial assets and liabilities and at:
  - its fair value
  - plus transaction costs (unless classified as fair value through profit or loss)

- If the financial guarantee contract was issued to an unrelated party in a stand-alone arm’s length transaction, its fair value at inception is likely to equal the premium received, unless there is evidence to the contrary.
Financial Liabilities – Measurement

After initial recognition,

- An issuer of such contract and such guarantee shall measure it at the higher of:
  
  i) the amount determined in accordance with HKAS 37 Provisions, Contingent Liabilities and Contingent Assets; and

  ii) the amount initially recognised less, when appropriate, cumulative amortisation recognised in accordance with HKAS 18 Revenue.

Financial Liabilities – Measurement

- However, for financial guarantee contracts alone, such contracts may be excluded from the scope of HKAS 39

  HKAS 39.2e states that:

  “if an issuer of financial guarantee contracts

  – has previously asserted explicitly that it regards such contracts as insurance contracts and

  – has used accounting applicable to insurance contracts,

  • the issuer may elect to apply either
    – HKAS 39 or
    – HKFRS 4

  to such financial guarantee contracts (see paragraphs AG4 and AG4A).

  The issuer may make the election contract by contract, but the election for each contract is irrevocable.
Financial Liabilities – Measurement

Case

• 2006 Annual Report
  – Financial guarantee contracts under which the Group accepts significant risk from a third party by agreeing to compensate that party on the occurrence of a specified uncertain future event
    • are accounted for in a manner similar to insurance contracts.
  – Provisions are recognized when
    • it is probable that the Group has obligations under such guarantees and
    • an outflow of resources embodying economic benefits will be required to settle the obligations.

Annual Report 2006 – Note 3.20 clarified that
• A financial guarantee contract is
  – a contract that requires the issuer (or guarantor) to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the terms of a debt instrument.
• Where the Group issues a financial guarantee, the fair value of the guarantee is initially recognised as deferred income within trade and other payables.
  – Where consideration is received or receivable for the issuance of the guarantee, the consideration is recognised in accordance with the Group’s policies applicable to that category of asset.
  – Where no such consideration is received or receivable, an immediate expense is recognised in income statement on initial recognition of any deferred income.
Financial Liabilities – Measurement

Annual Report 2006 – Note 3.20 clarified that

- The amount of the guarantee initially recognised as deferred income
  - is amortised in income statement over the term of the guarantee as income from financial guarantees issued.
- In addition, provisions are recognised if and when
  - it becomes probable that the holder of the guarantee will call upon the Group under the guarantee and
  - the amount of that claim on the Group is expected to exceed the current carrying amount, i.e. the amount initially recognised less accumulated amortisation, where appropriate.

Note 51 “Contingent Liabilities” of 2006 Annual Report states that:

a) Guarantees given and indemnities provided by the Group and the Company in respect of credit facilities granted to ……
  - Other than the guarantee provided by the Company as mentioned in item (a), the directors considered that the fair values of these financial guarantee contracts at their initial recognition are insignificant on the basis of short maturity periods and low applicable default rates.
  - The financial guarantee contracts of the Company have been recognised in the Company’s financial statements.
Financial Liabilities – Measurement

Case

Suncorp Technologies Limited – 2006 Annual Report:

Note 3:
– In relation to financial guarantees granted to certain banks over the repayment of loans by a jointly controlled entity, the Group has applied the transitional provisions of HKAS 39.
– The fair value of the financial guarantee contracts at the date of grant was approximately HK$3.4 million.
– It represents a deemed capital contribution to the jointly controlled entity and has been included in the cost of investment in the jointly controlled entity.

Note 26
– In September 2006, the Group has given financial guarantees to two banks in respect of the credit facilities of HK$56,634,000 granted to a jointly controlled entity for a period of 10 months.
– The directors have assessed the fair value at the date of granting the financial guarantees to be approximately HK$3,354,000 and the amount is amortised to the consolidated income statement over the period of the facilities granted.

Relassify Financial Liability

Reclassification

• Similar to financial asset, transfer into or out of financial liabilities at fair value through profit or loss is prohibited while it is held or issued
• Unless, in rare cases, a reliable measure of fair value is no longer available
• Then, it should be carried at amortised cost

Implication

• Reclassification is infrequent or rare

Derivative & Embedded Derivative

Derivative ⇒ is a financial instrument or other contract within the scope of HKAS 39 with all 3 of the following characteristics:

a) its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable (sometimes called the ‘underlying’);

b) it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors; and

c) it is settled at a future date.

Little or no initial net investment

Settled at a future date

- What is the initial measurement and subsequent measurement on derivative?

Initial measurement
- Similar to other financial assets and liabilities
  - Fair value plus transaction cost, except for those classified at fair value through profit or loss
- But, a derivative (except for a financial guarantee contract or designated effective hedging instrument) is classified as fair value through profit or loss
  - Implies fair value only

Subsequent measurement
- As above, derivative, other than a financial guarantee contract or designated effective hedging instrument, is classified and measured at fair value through profit or loss
Derivative & Embedded Derivative

Ping An Insurance (Group) Co. of China, Ltd.

- **Accounting report 2006**
  - Derivative financial instruments include
    - options embedded in convertible bonds purchased by the Group,
    - derivatives embedded in certain insurance contracts,
    - interest rate swaps and futures,
    - credit default swaps,
    - cross currency swaps,
    - forward currency contracts, and
    - options on interest rates, currencies and equities, etc.
  - Derivative financial instruments are classified as held for trading
    - unless they are designated as effective hedging instruments.
  - All derivatives are carried
    - as assets when the fair values are positive and
    - as liabilities when the fair values are negative.

A holder of a hybrid (combined) instrument is required to evaluate whether the embedded derivative should be separately accounted for in accordance with HKAS 39.

A hybrid instrument includes
- a non-derivative host contract and
- an embedded derivative with the effect that some of the cash flows of the hybrid instrument vary in a way similar to a stand-alone derivative.

However, a derivative that is attached to a financial instrument but is contractually transferable independently of that instrument, or has a different counterparty from that instrument, is not an embedded derivative, but a separate financial instrument.
Derivative & Embedded Derivative

- Examples of contract with embedded derivative include:
  1. A call, put, or prepayment option embedded in a host debt contract.
  2. An option or automatic provision to extend the remaining term to maturity of a debt instrument.
  3. Equity-indexed interest or principal payments embedded in a host debt instrument.
  4. Commodity-indexed interest or principal payments embedded in a host debt instrument.
  5. An equity conversion feature embedded in a convertible debt instrument.

HKAS 39 requires an entity to separate an embedded derivative from the host contract and account for such embedded derivative as a derivative if, and only if:

1. the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host contract;
2. a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and
3. the hybrid instrument is not measured at fair value with changes in fair value recognised in profit or loss (i.e. a derivative that is embedded in a financial asset or financial liability at fair value through profit or loss is not separated).
Derivative & Embedded Derivative

- If an embedded derivative is separated, the host contract is accounted for
  - under HKAS 39 if it is a financial instrument, and
  - in accordance with other appropriate accounting standards if it is not a financial instrument.
- HKAS 39 does not address whether an embedded derivative is presented separately on the face of the financial statements.
- The separated embedded derivative is similar to a simple derivative to be accounted for in the same manner as other derivatives.
If a contract contains one or more embedded derivatives, an entity may designate the entire hybrid (combined) contract as a financial asset or financial liability at fair value through profit or loss unless:

1. the embedded derivative does not significantly modify the cash flows that otherwise would be required by the contract; or
2. it is clear with little or no analysis when a similar hybrid instrument is first considered that separation of the embedded derivative is prohibited, such as a prepayment option embedded in a loan that permits the holder to prepay the loan for approximately its amortised cost.

If an entity is required by HKAS 39 to separate an embedded derivative from its host contract, but is unable to measure the embedded derivative separately (either at acquisition or subsequently), the entity is required to designate the entire hybrid contract as at fair value through profit or loss.
**Index-linked Principal**

- Entity A purchases a 5-year equity-index-linked note with an original issue price of $10 at a market price of $12 at the time of purchase.
- The note requires no interest payments before maturity.
- At maturity, the note requires
  - Payment of the original issue price of $10
  - Plus a supplemental redemption amount that depends on whether
    - a specified share price index > a predetermined level at the maturity date.
  - If the share index < or = the predetermined level
    - the supplemental redemption amount is zero
  - If the share index > the predetermined level
    - the supplemental redemption amount equal a factor of level of the share index at maturity
- Entity A has the positive intention and ability to hold the note to maturity.
- Can Entity A classify the note as a held-to-maturity investment?

---

Yes, subject to the separation of embedded derivative.

- The note can be classified as a HTM investment because
  - it has a fixed payment of $10 and fixed maturity and
  - Entity A has the positive intention and ability to hold it to maturity.
- However, the equity index feature is a call option not closely related to the debt host, which must be separated as an embedded derivative.
- The purchase price of $12 is allocated between
  - the host debt instrument and
  - the embedded derivative
- For example
  - if the fair value of the embedded option at acquisition is $4
  - the host debt instrument is measured at $8 on initial recognition
  - Then, the discount of $2 that is implicit in the host bond (principal of $10 minus the original carrying amount of $8) is amortised to profit or loss over the term to maturity of the note using the effective interest method.
